

Clinical Outreach Member

Virufy Mission Statement: Our vision is to develop a smartphone app that can be used by everyone in the world to find out in seconds whether they have COVID-19. We are utilizing cutting-edge artificial intelligence technology to identify patterns undetectable by humans from the unique respiratory signatures of lungs damaged by the virus.

Job Description Overview: Big data from patients of multiple cultures and backgrounds is necessary for our AI algorithms to learn and be applicable globally. We need your help to reach out to hospitals, public health departments, and governments across the world in hotspot areas, where many patients are testing positive for COVID-19.

Responsibilities:

- Emailing multiple hospitals, public health departments, and governments across the world in at least two global COVID-19 hotspots each week.
- *If you hear a response from any of the above contacts:* helping initiate the process to start a clinical data collection study and following up as needed.
- Reaching out to students attending universities in hotspot areas around the world in order to recruit them for our Student Ambassador program. The Student Ambassadors will be leading data crowdsourcing campaigns in their local and regional areas.
- Attending 30 minute meetings twice a week for check-ins and progress updates.

Requirements:

- Previous experience in community outreach and organizing (including volunteering or internship)
- Previous experience and/or knowledge of clinical data collection studies preferred
- Organized, collaborative, and detail oriented
- Timely communication over email and Slack
- Accountability, responsibility, and professionalism, especially when communicating with clinical contacts
- Proficiency handling the Google Suite (Drive, Docs, Sheets)

Hours:

5-10 hours per week
